

Tricolore Verde

CRISTINA Design Lab

CRITV129

Tricolore Verde is the most complete series of the entire range produced by CRISTINA Rubinetterie, created and designed in 2001 internally by our CRISTINA Design Lab team. The continuously enriched range has been able to anticipate trends and needs, providing stylistic continuity, the value of which has been enhanced over time and has become increasingly more popular. The timeless success of the series derives from the pure and minimal structure given by its cylindrical body, leaving no room for the superfluous. The mixer tap is defined starting from a de-zincified brass bar, a production process that enables the development of a wide range of solutions, both in terms of spout length and product height, allowing the mixer tap to suit to every user's needs. The structure of the mixer tap alongside the variety of finishes make it a collection to be used both in contemporary and residential environments as well as in contract contexts.
